## Technology to block noise

### Sound-insulating ear pads

Soft memory foam cushions with extremely smooth surface ear pads that fit exactly on your ears create a seal to block background noise.

### Dual housing structure

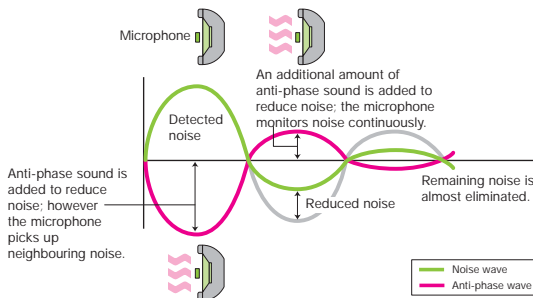

Dual acoustic wall blocks incoming background noise.

## Technology to reduce noise

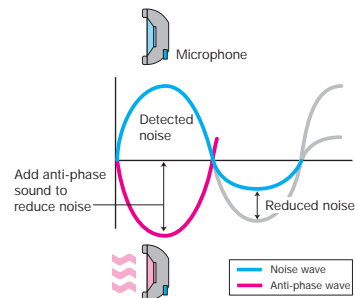

### Equipped with advanced noise cancellation technology

Even after reducing background noise, some will remain. A microphone close to the driver unit picks up such remaining noise and the feedback circuit produces the appropriate amount of additional anti-phase sound. Every nuance of audio becomes clear through this feedback technology.

#### ● Advanced noise canceling with "feedback technology"
